* Each *single-correct-response* item (question) is worth one point. Each **response** of a *multiple-correct-response* item is worth one point, because **not** checking a wrong (distractor) response is worth as much as checking a correct response. E.g., a score of zero to five is possible from a five-response, multiple-correct-response item.

Percent correct (on average) within Category:

Results are reported for each item by number and percentage of students choosing each possible response. Correct responses are in **red** and bulleted.

- 19. [Evaluate sources and information]** Being information literate means being able to identify when two or more sources agree and disagree. Read the two paragraphs below. Which paragraph discusses this information: Secondhand smoke kills people.

Author #1

The latest studies indicate that death rates for smokers are two to three times higher than for non-smokers at all ages. This means that half of all smokers will eventually die as a result of their smoking. If current smoking trends persist, nearly 9% of the world's population will eventually die as a result of tobacco.

Author #2

Many people still do not believe smoking causes serious health risks. In addition to respiratory illnesses, secondhand smoke causes 3,000 cancer fatalities each year. If people continue to smoke at the current rate, a huge number of these smokers will bring about their own death. At least five out of every ten will die. [CHOOSE ONE ANSWER]
